I claim:

1. (Currently amended): 1. A pair of cordless battery operated actuating chargers activating one another in a vehicle, other vehicles and performing said activation of other devices, comprising:

a first 2.5A battery charger, thereby, defining 96 percent efficiency;

a second 2.5A battery charger, thereby having said 96 percent efficiency also;

~~a power switch mounted~~ [[upon]] [[said]] [[first]] ~~charger~~ [[for]] ~~placement~~ [[of a]] ~~user's finger~~ [[,]] ~~thereby, activated~~ [[by]] ~~pressing~~ [[a]] ~~surface~~ [[of]] [[said]] ~~switch~~ [[for]] ~~actuating~~ [[said]] ~~chargers simultaneously,~~ [[said]] ~~switch~~ [[is]] [[set]] [[on a]] ~~column~~ [[for]] ~~actuating~~ [[said]] ~~vehicle~~ [[also;]]

a first switch mounted upon said first charger for placement of a user's finger, thereby, activated by pressing a surface, and a second switch actuated, when said surface is depressed: activating said first and second chargers simultaneously;

said first and second switches, thereby defined on a dashboard, or a column of said vehicle also;

~~a buck-mode switching regulator (IC1) for, thereby controlling said exterior~~ [[power]] ~~switch; said~~ [[IC1]] ~~defining a charge pump for generating a positive gate drive voltage required~~ [[by]] ~~said switch~~[[;]]

a buck-mode switching regulator (IC1) for, thereby controlling said first and second switches; said IC1 having a charge pump for defining a positive gate-drive voltage required, thereby, said first and second switches;

a battery-charging current having a voltage across a 25-ohms resistor (R3), and is amplified via an

op amp, thereby including positive-voltage feed-back to said **IC1**;

~~a chip for maintaining said charging current at 2.~~ [[**5A**;]]

a chip for maintaining said charging current about said **2.5A**;

a circuit for supplying said current to a separate load up to a limit set, thereby, a current-sense transformer **(T1)** including a sense resistor **(R1)** thereby improving efficiency, and lowering power dissipation in said resistor **R1** when charging;

2. (Currently amended): **2.** A pair of energy chargers as defined in claim **1**, wherein said transformer **T1** turns ratio **(1:70)** routes only **1/70** via the total battery-plus-load current through said resistor **R1**.

3. (Currently amended): **3.** A pair of energy chargers as defined in claim **1**, wherein said transformer **T1** has said voltage feed-back to let said **IC1** limit the overall current to a level compatible by the outer components and a **100mV current-limit** threshold.

4. (Currently amended): **4.** A pair of cordless battery operated actuating chargers activating one another in a vehicle, other vehicles and performing said activation of other devices, comprising:

a first charger actuating a second charger whereby said second charger performing said actuation of said first charger, when a surface upon a first, and second power switch is depressed;

a first **DC-AC** converter for converting **DC** current to alternating current;

a second **DC** to **AC** converter for converting said **DC** current to said alternating current;

~~a first~~ [[AC]] ~~adaptor~~ [[for]] ~~connecting~~ [[said]] ~~chargers~~ [[to]] [[said]] ~~converters;~~

~~a second~~ [[AC]] ~~adaptor for joining said chargers~~ [[with]] [[said]] ~~converters,~~ [[when]] [[said]] ~~chargers having full charged energy:~~ ~~actuating one another by a conventional switch;~~

a first AC adaptor for coupling said first charger to said second converter;

a second AC adaptor for joining said second charger to said first converter, when said first, and second chargers having full-charged energy: actuating one another via said first, and second switches;

a first battery cartridge for restoring life about a first battery;

a second battery cartridge for restoring said life of a second battery;

~~a six cell feeder for distributing renewable agents~~ [[to]] [[said]] [[first]] ~~battery~~ [[,]] [[and]] ~~a six cell feeder for distributing renewable agents~~ [[to]] [[said]] ~~second battery.~~

a first six cell feeder about six penetrable seals for distributing an ionic conductor, where upon penetration, six battery cells are renewed about said first battery;

a second six cell feeder displaying six penetrable seals for dispensing said ionic conductor, where upon penetration, six battery cells are restored about said second battery;

5. (Currently amended): 5. A pair of energy chargers as defined in claim 4, wherein said vehicle having a motor mounted adjacent ~~said chargers~~[[.]] said first and second chargers.

6. (Currently amended): 6. A pair of energy chargers as defined in claim 4, wherein said motor comprises a polarized plug.

7. (Currently amended): 7. A pair of energy chargers as defined in claim ~~4, wherein said chargers performing said activation of said motor, when said plug is connected to said first converter.~~ 4, wherein said first and second chargers actuating said motor, when said plug is connected to said first converter.

8. (Currently amended): 8. A pair of energy chargers as defined in claim ~~4, wherein said chargers performing said activation of said motor, thereby starting said vehicle.~~ 4, wherein said first and second chargers actuating said motor, thereby starting said vehicle.

9. (Currently amended): 9. A pair of energy chargers as defined in claim 4, wherein said batteries are joined about an alternator for its belt, and pulley to spin **(60 cps/60 Hz)** via said motor.

10. (Currently amended): 10. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby performing said activation of said motor, when activating one another.~~ 4, wherein said first and second chargers thereby performing said activation of said motor, when activating one another.

11. (Currently amended): 11. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby performing said activation of one another, when said motor is turned off.~~ 4, wherein said first and second chargers thereby performing said actuation of one another when said motor is turned off.

12. (Currently amended): 12. A pair of energy chargers as defined in claim ~~4, wherein said chargers activate said other vehicles in the air, upon the earth, and in the water.~~ 4, wherein said first and second chargers actuate said other vehicles in the air, upon the earth, and in the water.

13. (Currently amended): 13. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby performing said activation about said other devices, in homes, condominiums, Hospitals, Air Ports, offices, housings, and Generating Stations.~~ 4, wherein said first and second chargers thereby performing said actuation of said other devices in homes, condominiums, Hospitals, Air Ports, housings, and Generating Stations.

14. (Currently amended): 14. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby actuating computers, televisions, electric ranges, air conditioners, and all portable devices about radios, CD players including refrigerators.~~ 4, wherein said first and second chargers, thereby actuating computers, televisions, electrical ranges, air conditioners, radios, CDs, laptops, refrigerators, and all portable units.

15. (Currently amended): 15. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby actuating cordless escalators at Air Ports, and Train stations.~~ 4, wherein said first and second chargers actuating cordless escalators at Air Ports.

16. Currently amended): 16. A pair of energy chargers as defined in claim ~~4, wherein said chargers activating snow removal equipment, fire fighting equipment and motorized wheelchairs.~~

4, wherein said first and second chargers actuate snow removal equipment, fire fighting gear and motorized wheelchairs.

17. (Currently amended): 17. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby performing said activation of satellites, and systems for interception of missals.~~
4, wherein said first and second chargers thereby activating satellites, and systems for interception about missals.

18. (Currently amended): 18. A pair of energy chargers as defined in claim ~~4, wherein said chargers connected about series-parallel are equal to the sum of the power values consumed via each load.~~
4, wherein said first, and second chargers joined by series-parallel are equal to the power values consumed by any load.

19. (Currently amended): 19. A pair of energy chargers as defined in claim ~~4, wherein said cartridges including a LED and resistors for actuating a first second gear motor, battery life is renewed when said gear motors free said renewable agents.~~
4, wherein said cartridges including a LED and resistors for actuating a first and second gear motor, battery life is renewed when said gear motors free said restorable conductors.

20. (Currently amended): 20. A pair of energy chargers as defined in claim ~~4, wherein said chargers, thereby activate backup systems to prevent the loss of data about computers.~~
4, wherein said first and second chargers, thereby, activate backup systems to prevent the loss of data of computers when activating an associated system under fault conditions.
